HARI SHANKAR BAKKAMANTHULA

Associate AI Automation Engineer | AI Agents, Workflow Automation, Backend Engineering

Ongole, Andhra Pradesh, India | +91 7330920531 | harishankar3618@gmail.com
harishankar3618.dev | github.com/harishankar3618 | linkedin.com/in/harishankar3618

PROFESSIONAL SUMMARY

Associate AI Automation Engineer at TechD Cybersecurity Limited building LangGraph and FastAPI agents, Microsoft Graph and SharePoint integrations, and Power Automate workflows for business teams. Delivered an agentic Microsoft Teams assistant over live CRM data, a PMO lifecycle portal replacing email-driven handovers across four departments, and a six-flow business development automation, with PRDs and implementation guides for each. Freelance full-stack work (React, Node.js, Laravel) and a cybersecurity specialization support a maintainable, security-aware approach to backend design. B.Tech CSE (Cybersecurity), 2026.

TECHNICAL SKILLS

AI & Agents: LangGraph, Agentic AI, LLM integration, provider-agnostic LLM abstraction, tool-registry pattern, conversation memory, Pydantic

Languages: Python, JavaScript, TypeScript, PHP, SQL

Backend & APIs: FastAPI, Flask, Node.js, Express, Laravel, REST APIs, Webhooks, JSON, JWT authentication, Microsoft Graph API, Stripe

Frontend: React, Next.js, TypeScript, HTML, CSS, Tailwind CSS

Automation & Enterprise Platforms: Power Automate, n8n, Make.com, Microsoft Teams, SharePoint, Microsoft Forms, Microsoft 365, Zoho CRM

Databases: PostgreSQL, MySQL, MongoDB, Supabase, Firebase

Tools & Deployment: Git, GitHub, Docker, Linux, AWS (EC2, S3), Postman

Security (Supporting): OWASP Top 10, Burp Suite, Nmap, Wireshark, Metasploit

PROFESSIONAL EXPERIENCE

Associate AI Automation Engineer | TechD Cybersecurity Limited Jan 2026 – Present

Began as Technical Delivery & SOC Analyst; moved into AI engineering and enterprise workflow automation.

- Built an agentic AI assistant for Microsoft Teams using LangGraph and FastAPI that lets the Business Development team query live SharePoint CRM data (pipeline, quotes, invoices, targets) in natural language and draft emails, with conversation memory across a Teams thread.
- Designed a layered backend (API, agent, services, repositories, Microsoft Graph client) with typed Pydantic models, structured logging and retry/backoff handling.
- Added a provider-agnostic LLM abstraction and a tool-registry pattern so new tools and LLM providers are added through configuration.
- Delivered the PMO Lifecycle Automation Platform, a custom web portal integrated with Microsoft Graph and SharePoint that replaced an email-driven project handover process across four delivery departments with a structured intake flow (auto-fill, Graph directory lookup of account owners, department-specific dynamic fields).
- Built a Business Development lifecycle automation on SharePoint, Microsoft Forms and Power Automate: six cloud flows covering quote approvals, deal closure, invoicing and daily MIS reporting, on a cross-list data model joined by a shared Quote ID.
- Wrote PRDs, FRDs and implementation guides defining scope, architecture and functional requirements for each project, for engineering, security and administrator review.
- Early tenure: triaged and classified alerts in a live SOC environment and automated recurring compliance reporting, reducing manual reporting effort by an estimated 40%.

Cybersecurity Intern | Tinkering Hub, Parul University Dec 2024 – Apr 2025

- Developed a Python-based malware detection platform with behavioral and signature-based scanning and automated quarantine, achieving 90%+ threat identification accuracy.
- Built a phishing-detection browser extension performing DOM analysis, URL entropy checks and reputation lookups (VirusTotal, AbuseIPDB), running fully client-side.

Cybersecurity Intern | SkillVertex Dec 2024 – Jan 2025

- Performed vulnerability assessment and penetration testing on test web targets using Nmap, Burp Suite and Metasploit, identifying SQL injection, XSS and IDOR issues, and wrote CVSS-scored remediation reports for developers.

FREELANCE SOFTWARE DEVELOPMENT & INDEPENDENT PROJECTS

Freelance Full-Stack Developer 2023 – Present

- Developed full-stack web applications across MERN, Laravel and Python stacks, including EHR-style record management and point-of-sale applications, with JWT authentication and Linux deployments.

- Developed React and TypeScript front ends backed by Supabase or Firebase on freelance and team projects: SwiftCart (multi-role e-commerce with role-based route protection, Redux Toolkit and TanStack Query), SponsorKit AI (admin panel with RBAC), Tully MVP (Supabase auth and Stripe payments) and SlidePulse (PowerPoint add-in with Supabase Realtime).

SELECTED PROJECTS

- **SecureScope:** OWASP Top 10 vulnerability scanner built with Python, Flask and a React frontend; a modular plugin architecture lets each analysis module run independently and feed severity-ranked findings and exportable reports.
- **RansomWatch:** Laravel and MySQL malware detection and incident-management platform with real-time file scanning, behavioral anomaly detection, automated quarantine and an extensible rule engine.
- **Endpoint & Phishing Defense:** Windows endpoint tool using heuristic, behavior-based threat classification, plus a client-side browser extension combining URL entropy analysis and brand-spoofing detection.
- **Secure Chat Application:** MERN real-time messaging app with Socket.IO delivery, JWT authentication, role-based access control and client-side encryption before transmission.

EDUCATION

B.Tech, Computer Science and Engineering (Cybersecurity Specialization) 2022 – 2026
Parul University, Vadodara, Gujarat | CGPA: 7.05 | Convocation expected December 2026

CERTIFICATIONS

AI Automation Explorer, Make Academy (Jul 2026); C3SA Certified Cloud Security Analyst, CyberWarfare Labs; Google Cloud Cybersecurity Professional Certificate; AWS Cloud Essentials; Ethical Hacking Essentials, EC-Council; Kali Linux, Offensive Security
